Agile Model
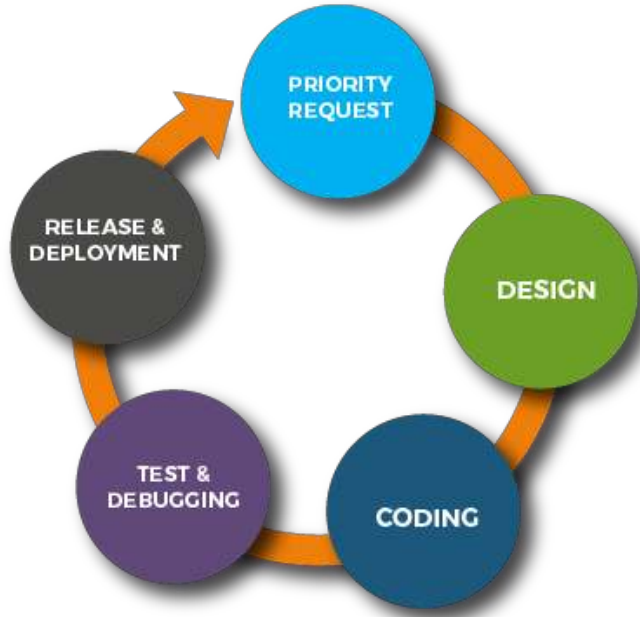

Agile Model

- To overcome the challenges faced in the Waterfall Model, we came up with the Agile Methodology

- Agile Method believes in creating shorter development lifecycles

- Shorter Development Lifecycles are achieved by not releasing all the features at once by following an incremental model of development

Advantages of Agile Model

- ✅ Customer Satisfaction is high
- ✅ Less Planning Required
- ✅ Requirements can be dynamic in nature
- ✅ Functionality can be created and tested quickly

Disadvantages of Agile Model

❌ Not suitable for handling complex dependencies in projects

❌ Knowledge transfer to colleagues can be difficult since there is little documentation

❌ Success of the project depends heavily on customer interaction
